Hardwired models  
FTN-ST,  
FTN-AM (Anti-mask)

Battery powered models  
FTN-R  
FTN-RAM (Anti-mask)

Optex are pleased to announce the launch of the our new high performance external range of FTN-**fit** sensors.

The FTN-**fit** sensor has been developed to protect specific areas around commercial or residential properties, eliminating alarm activity from low risk targets. The FTN-**fit** is available in four models, two hardwired and two battery powered devices.

### High performance/High security

The FTN-**fit** sensors incorporates target recognition technology to reduce false alarm activity. The defined detection pattern limits detection to precise areas reducing detection overspill and allowing only risk level activity to be captured. To improve system integrity ANTI-MASKING options are also available on both hardwired and battery powered wireless devices, protecting the sensor from attack.

### Flexible compact design

The compact design allows installation to be completed with minimal impact on decoration and architecture. For added flexibility the detection head can be rotated through 180° allowing the device to monitor both perimeter or building approach activity.

### New opportunity and cost reduction

The FTN-**fit** sensor provides the industry with a new level of performance, delivering solution based detection where needed and avoiding troublesome false alarm activity. The battery powered range can integrate with most leading wireless protocols allowing easy installation in the most difficult locations. From ground floor to multi-storey locations the FTN-**fit** sensor can provide the right solution.
